

HIGHLAND ESTATE LANDSCAPING & ACCESS

As part of a major £20m renovation and restoration project at this prominent Highland estate, Kishorn Heritage carried out extensive construction and ground works to augment the access to the castle. Working closely with award-winning landscape architect Tom Stuart-Smith we created a new cobbled access road and suspension bridge and carried out substantial hard landscaping and ground works.

Project scope:

Landscaping and access works

Project value:

Part of a £20m estate upgrade

Duration:

Five years

Architect:

Ptolemy Dean Architects

Landscape architect:

Tom Stuart-Smith

Materials:

Reclaimed granite setts, local stone, locally-founded bronze details on suspension bridge

Features:

Serpentine wall, Bastion wall, courtyards, paths, landscaped gardens

To realise Tom Stuart-Smith's vision for the new access to the castle, Kishorn Heritage constructed a series of roads, a suspension bridge with stone parapets and various connecting terraces, courtyards and paths. All stone used on this project was quarried locally and hand-dressed on site where at all possible. The large courtyards were finished using reclaimed original granite setts from the streets of historic Edinburgh.
